

Palestine Strawberry Clover

Trifolium fragiferum

Palestine strawberry clover is a highly adaptable hard seeded perennial clover that performs well in hostile conditions. It is generally considered the best clover for toxic soils with high tolerance to salinity, alkalinity and waterlogging. It is also tolerant of the majority of insect and disease pests that affect other clovers. Palestine strawberry clover is prostrate in growth habit and slow to establish with poor winter growth, but generally is more persistent than other perennial clovers under grazing.

- Deep rooted perennial clover
- Good hard seed levels
- Good performance under hostile conditions (salinity, alkalinity & waterlogging)

Seed agronomy table

Maturity	Early
Min Rainfall	500
Hard Seededness	High
Waterlogging Tolerance	Excellent
Seeding Rate	Kg/Ha
Dryland	2-3
High Rainfall / Irrigation	3-4

Enterprises this seed is being used for

Sheep
Beef Cattle
Horse
Hay & Silage
