

Sub-clover

SF Yanco

Sub-clover

FEATURES	BENEFITS
Sub species yanninicum (cream seeded)	Tolerant of water-logging Well suited to flood irrigated hay production
High seed yields	Higher seedling regeneration in years 2 and beyond Higher autumn/winter yields from more plants
Mid-season flowering	Produces more feed in medium-high rainfall zone Will re-seed in early season finishes
Strong clover scorch resistance	Better plant survival and forage yields
Good hard seed levels	Protects against seedling losses with false breaks

SF Yanco is a mid-season yanninicum sub-clover providing a new and improved replacement for Riverina, Trikkala and Monti. It is well adapted to moderately acidic (pH CaCl₂ 4.5-6.5) soils prone to waterlogging and to loamy and clay soils with good water retention. It is highly resistant to both Race 1 and 2 of clover scorch (*Kabatiella caulivora*) and that coupled with its outstanding seeding ability, ensures highest autumn-winter forage yields and high total yields. It is SF Yanco is suitable for permanent and semi-permanent pastures. It can be used in cropping rotations, but at least two years of pasture are required between crops. Its upright, vigorous growth makes it suited to hay and silage production, as well as to grazing by cattle or sheep.

Best suited to areas with approximately 450-700 mm annual average rainfall and where the growing season extends into November.
